- L7 ANSWER 22 OF 26 CAPLUS COPYRIGHT 2005 ACS on STN
AB In diabetic rats, a hypoglycemic effect was observed after treatment with
insulin [9004-10-8]-containing liposomes composed either of
lecithin-cholesterol [57-88-5]-benzalkonium chloride (7:2:2) or
lecithin-cholesterol-stearylamine [124-30-1] (7:2:2.25). No difference
was seen between the hypoglycemic effects of the 2 liposome types, showing
benzalkonium chloride to be suitable as a liposome membrane
component.
